

In the Claims:

Please cancel claim 45, replace claims 15, 19, 30, 32, 36, 43, and 47, all as shown below.

All pending claims are reproduced below, including unchanged claims and marked up versions of amended claims.

15. (Currently Amended) A method for reconstruction of an image, comprising the steps of:
combining an upper plane and lower plane of image data into an additive plane; and
selecting pixels of the image to be reconstructed from plural planes of data representing the image, wherein said step of selecting comprises:

selecting pixels based on a selector plane that identifies, for each part of the original image, whether the original image information is maintained in ~~an~~ the upper plane or the additive plane ~~a combination of the upper and at least one lower plane of said plural planes.~~

18. (Original) The method according to Claim 15, further comprising the step of:
decompressing said plural planes, including at least an upper plane and a lower plane, from a compressed state.

19. (Currently Amended) The method according to Claim 18, wherein:
said step of ~~selecting~~ combining comprises,
~~combining said upper and lower decompressed planes to produce an additive image, and~~
combining a pixel of the upper plane and lower plane of image data, the additive plane

~~including a single additive pixel selecting pixels of the reconstructed image from corresponding pixel locations of one of said decompressed upper plane and said additive image.~~

20. (Original) The method according to Claim 18, wherein:

said step of decompressing includes the step of,
decompressing a selector plane maintaining information identifying which pixels of each other decompressed plane are representative of pixels of the reconstructed image; and
said step of selecting comprises, selecting pixels for the reconstructed image based on the selector plane information.

30. (Currently Amended) An apparatus for reconstructing an image, comprising:

a decompression device configured to decompress planes representing the image;
a combining device configured to combine an upper plane and lower plane of image data into an additive plane; and

a selection device configured to select image data from at least one of the planes and the additive plane ~~combination of an upper and at least one lower image sections of at least two of the decompressed planes~~ to reconstruct the image.

31. (Original) The apparatus according to Claim 30, wherein said selection device is further configured to weight an amount of said result derived from said upper plane based on a predetermined factor.

32. (Currently Amended) The apparatus according to Claim 31, wherein said predetermined factor is a value of a selector plane that identifies how much of said result is derived from each of said upper and ~~lower~~ additive planes.

33. (Original) The apparatus according to Claim 32, wherein said value of said selector plane is based on at least one of super-resolution and fine edge detail in corresponding locations of said image.

36. (Currently Amended) An apparatus for image reconstruction, comprising:
means for combining an upper plane and a lower plane of data into an additive plane;
means for reconstructing an image based on pixels selected from one of at least one of plural planes representing the image and the additive plane ~~combination of corresponding pixels of the upper and at least one lower plane of said plural planes.~~

37. (Previously Amended) The apparatus according to Claim 36, further comprising:
means for decompressing said plural planes and at least one selection mask of the image to be reconstructed.

38. (Original) The apparatus according to Claim 36, wherein said means for reconstructing includes means for selecting pixels based on said at least one selector mask.

43. (Currently Amended) A computer readable media, storing instructions, that when loaded

into a computer, cause the computer to perform the step of:

combining an upper plane and lower plane of image data into an additive plane; and

selecting pixels of the image to be reconstructed from plural planes of data representing the image, wherein said step of selecting comprises:

selecting pixels based on a selector plane that identifies, for each part of the original image, whether the original image information is maintained in an the upper plane or the additive plane ~~combination of the upper and at least one lower plane of said plural planes.~~

45. (Cancelled)

46. (Original) The computer readable media and instructions according to Claim 43, wherein said instruction further cause the computer to perform the step of:

decompressing said plural planes, including at least an upper plane and a lower plane, from a compressed state.

47. (Currently Amended) The computer readable media and instructions according to Claim 46, wherein: said step of ~~selecting~~ combining comprises;

combining ~~said upper and lower decompressed planes to produce an additive image, and~~ a pixel of the upper plane and lower plane of image data, the additive plane including a single additive pixel ~~selecting pixels of the reconstructed image from corresponding pixel locations of one of said decompressed upper plane and said additive image.~~
